Maybe Brad can cover the 900 since he has the site walk that day too. Then you can do the FEB at 11. You probably can't do both since the schedule is tight. Talk to Brad and let me know if that will work.

Yes – I don't recall having this conversation with Curtis, but he probably assumed that since you will be in town for the other Nov 12 meeting hosted by StL County Emergency Management, you could also cover this one. I don't know what time this one is though. Check with Ben. FEB meetings are commonly held in the early mornings so you may need to travel the night before.

If you aren't available, let me know and we will regroup.

Arch and Lynn,

We're looking forward to the discussion with the FEB on Nov. 12.

- Please let us know when and where the FEB meeting is scheduled.

Jeff Field, is the senior manager overseeing this Superfund Site and will be in St. Louis on Nov. 12 to meet with your Board, as well as local School Districts. Last week he joined the St. Louis County Department of Health Director and Bridgeton Mayor at the St. Louis Regional Chamber of Commerce Energy and Environment Committee to update business leaders.

Best regards,

Curtis

Dr. Carey,

The St Louis FEB members have voted to include you in our agenda for the 12 November Full Board.

We look forward to scheduling you for this date and probably towards the end of the meeting.

very respectfully, arch

Good Morning Archibald,

I'm reaching out to share information about the West Lake Landfill, which you may have heard about in recent news stories in St. Louis.

If you have room on the agenda for your upcoming Federal Executive Board meeting on November 12, we would welcome the opportunity to meet with your team. We are located in the Kansas City metro area and are members of our local FEB.

Yesterday, we published a new West Lake Update newsletter. The newsletter addresses recent documents released by the MO AG and provides details on the extensive sampling that demonstrates there is no imminent danger to public health from the radiologically-impacted material in the West Lake Landfill. Moreover, EPA's top researchers in the Office of Research and Development indicate that even in the highly unlikely scenario that the subsurface smoldering event in the adjacent Bridgeton Landfill reached the RIM there's no evidence that RIM could

become explosive.

EPA Region 7's goal at the site is to protect the health of the people who work at and live around the West Lake Landfill. To accomplish this goal, we are directing the PRP's to complete the investigations necessary to support a remedy decision that can be implemented as quickly as possible.

We are continuing to work closely with the MDNR to monitor site conditions.

We also continue working closely with the county emergency manager in his routine contingency planning.
